

DANIYAL KHAN

AI / Machine Learning Engineer — BS Artificial Intelligence Student

Attock, Punjab, Pakistan | +92 311 5398789 | dk6662805@gmail.com | [Linkedin](#) | [Portfolio](#)

SUMMARY

BS Artificial Intelligence student with hands-on experience building machine learning, intrusion detection, and rule-based AI systems in Python. Strong foundation in supervised learning, data analysis, and algorithmic problem-solving, with growing focus on LLMs and Retrieval-Augmented Generation (RAG). Practical exposure to networking fundamentals through Cisco Packet Tracer and home-lab configuration. Seeking a full-time AI/ML engineering role to apply and grow these skills.

TECHNICAL SKILLS

- Languages & Tools: Python, Java, MS Word, Git/GitHub
- Machine Learning: Supervised & Unsupervised learning, Exploratory Data Analysis, Pandas, Scikit-learn
- AI Interests: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Agentic AI
- Networking: Cisco Packet Tracer, home-lab setup, network fundamentals
- Concepts: Data Structures & Algorithms, Linear Algebra for ML

PROJECTS

Intrusion Detection System

- Built a network intrusion detection model using the CICIDS2017 dataset, applying Pandas-based preprocessing to handle large-scale, multi-format network traffic data.
- Tied machine learning techniques directly to networking/cybersecurity use cases, reinforcing both ML and network-traffic analysis skills.

Emergency Dispatch Router

- Designed a classical AI routing system using BFS and A* search algorithms over a synthetic city graph to optimize emergency response routing.
- Implemented a Flask backend with an interactive HTML5 Canvas frontend for real-time route visualization.

Roman Urdu Sentiment Analysis using LLM

- Built a sentiment analysis system for Roman Urdu text using the Gemini API, addressing the challenge of analyzing informal, code-mixed language that standard NLP tools handle poorly.

EDUCATION

BS Artificial Intelligence — COMSATS University Islamabad

2024 – 2028

- CGPA: 3.00

CERTIFICATIONS

- Supervised Machine Learning: Regression — Coursera (Aug 2025)
- Exploratory Data Analysis for Machine Learning — Coursera (Jun 2025)
- Ethical Hacking 101 — Simplilearn

OTHER ACTIVITIES

- Volunteer of Alkhidmat foundation Pakistan.
